

SHEDDING LIGHT IN THE DARK - THE IMPORTANCE OF INTERNET MEASUREMENTS

Franziska Lichtblau

The Internet has shown an unprecedented growth over the last decades.

CHALLENGES IN THE MODERN INTERNET

Service availability

Global service coverage

Data integrity

Communication security

Reaction to new demands

-  Distributed system → no single source of truth
-  Constantly evolving
-  Multi-stakeholder model
-  Initial design does not focus on measurability

CHALLENGES IN INTERNET MEASUREMENT

Finding suitable vantage points

Correlating data from different vantage points

Measuring the correct variables

Deploying adequate hardware

Dealing with personal data

CHALLENGES IN INTERNET MEASUREMENT

Finding suitable vantage points

Correlating data from different vantage points

Measuring the correct variables

Deploying adequate hardware

Dealing with personal data

Every Internet measurement study must be carefully tailored to the specific research question.

VANTAGE POINTS

Data plane

- Actual traffic data
- Sampled flows
- Available through research collaborations
- Privacy sensitive
- Huge amount of data

TWO PERSPECTIVES

Data plane

- Actual traffic data
- Sampled flows
- Available through research collaborations
- Privacy sensitive
- Huge amount of data

Control plane

- Information on how traffic flows through the Internet
- BGP routing table dumps
- Publicly available
- Route collector projects, looking glasses
- Medium amount of data

TWO PERSPECTIVES

Data plane

- Actual traffic data
- Sampled flows
- Available through research collaborations
- Privacy sensitive
- Huge amount of data

Control plane

- Information on how traffic flows through the Internet
- BGP routing table dumps
- Publicly available
- Route collector projects, looking glasses
- Medium amount of data

Depending on the study data and control plane information can be utilized **alone** or **correlated**.

DATA PLANE VANTAGE POINTS IN MY PREVIOUS RESEARCH

IXPs

Central Europe
Southern Europe
US East Coast

Interconnecting networks

Core centric view

ISP

Central Europe
Residential customers
Tier-1 transit network

Edge centric view
+
Core centric view

Data is stored as *IPFIX* (IXPs) and *NetFlow* (ISP) and
always kept on-premise.

Very vantage point specific → relies on specifics about the traffic collection and physical infrastructure which can introduce artifacts:

Very vantage point specific → relies on specifics about the traffic collection and physical infrastructure which can introduce artifacts:

- Malformed packets created by the flow exporter
- Wrong timestamps
- Different kinds of traffic transported over the same network
- Misconfiguration

PUBLICLY AVAILABLE CONTROL PLANE VANTAGE POINTS

23 Collectors
RIB snapshots
3 multi-hop collectors

36 Collectors
RIB snapshots
6 multi-hop collectors

4 Collectors
RIB snapshots
multi-hop collectors with BGP add-path support
Project discontinued since 2021

Every BGP speaker is responsible for their announcements

many unexpected artifacts in the wild:

Every BGP speaker is responsible for their announcements

many **unexpected artifacts** in the wild:

- Announcements for Bogon prefixes
- AS paths containing loops
- Too specific prefixes ($< /24$ for IPv4)
- Too large prefixes ($> /8$ for IPv4)
- Private or unassigned ASes
- AS path poisoning
- Very long AS paths (path prepending)

Present a measurement study conducted in 2020, which:

- Addresses challenges in the modern Internet
- Highlights the importance of measurement studies
- Yields results for informed decision making

The Lockdown Effect: Implications of the COVID-19 Pandemic on Internet Traffic

Anja Feldmann, Oliver Gasser, Franziska Lichtblau, Enric Pujol, Ingmar Poesse, Christoph Dietzel, Daniel Wagner, Matthias Wichtlhuber, Juan Tapiador, Narseo Vallina-Rodriguez, Oliver Hohlfeld, Georgios Smaragdakis

Under lockdown, Italy's social and family life goes virtual

The Internet is essential in all these efforts, but how did it react?

TRAFFIC CHANGES JANUARY 2019 TO JUNE 2020

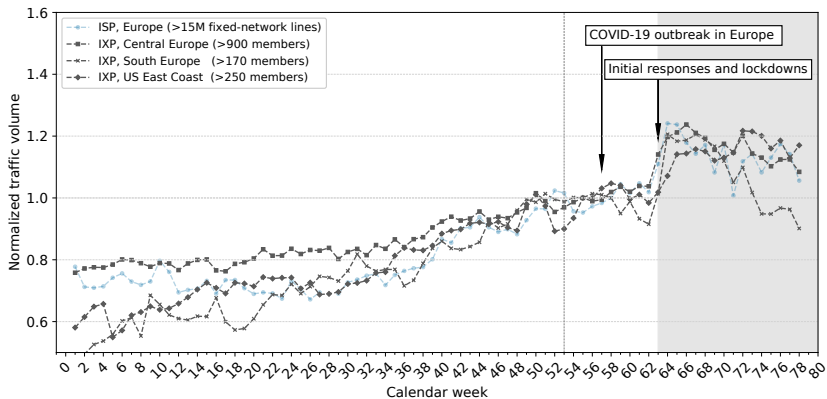

TRAFFIC CHANGES JANUARY 2019 TO JUNE 2020

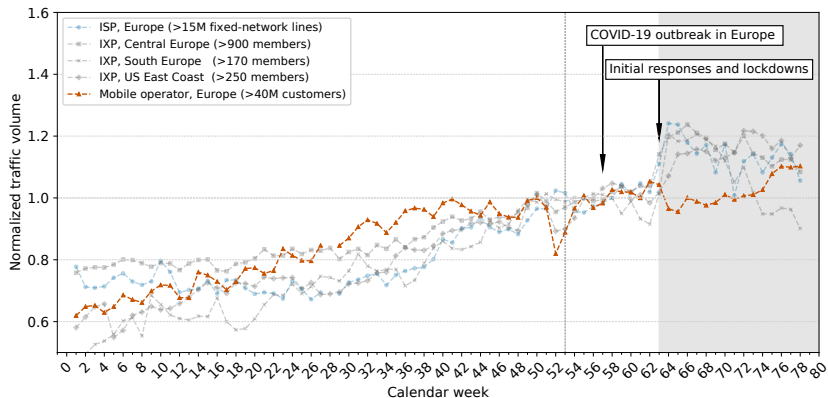

Once the lockdown started the ISP saw an **increase in traffic** which normally spans over multiple months.

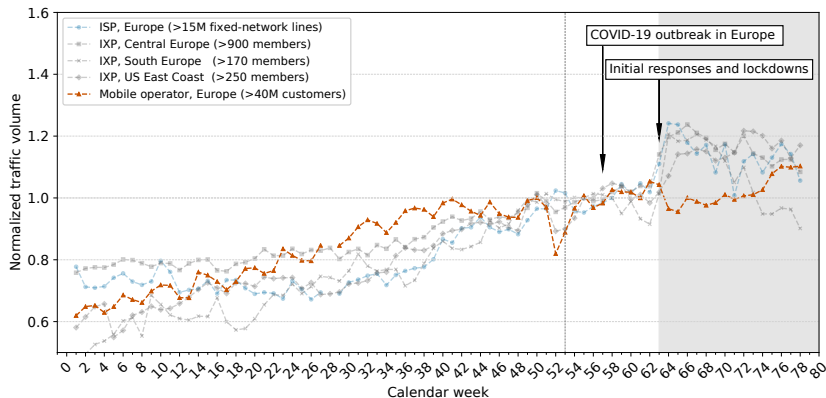

TRAFFIC CHANGES JANUARY 2019 TO JUNE 2020

TRAFFIC CHANGES JANUARY 2019 TO JUNE 2020

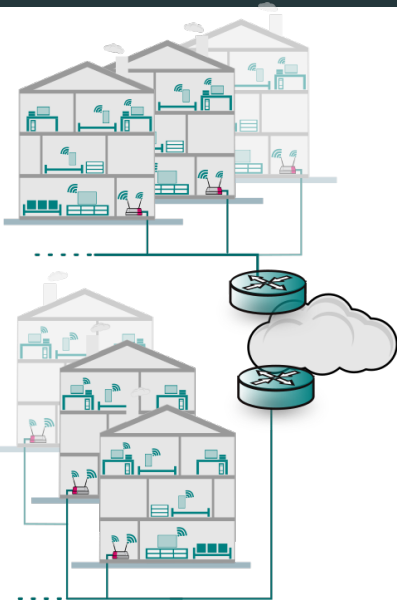

TRAFFIC CHANGES JANUARY 2019 TO JUNE 2020

Once the lockdown started **mobile traffic decreased** measurably and increases with the first relaxations in mid April.

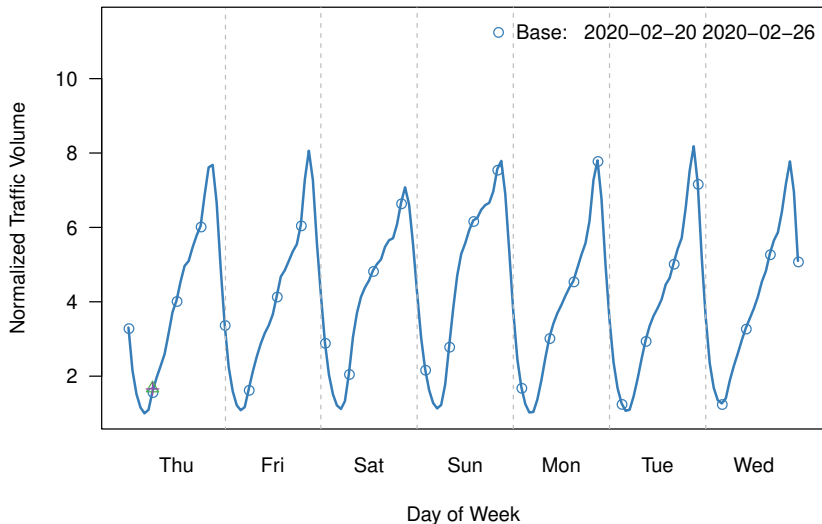

WHY IS THE ISP A GOOD VP TO OBSERVE THE EFFECT OF COVID-19?

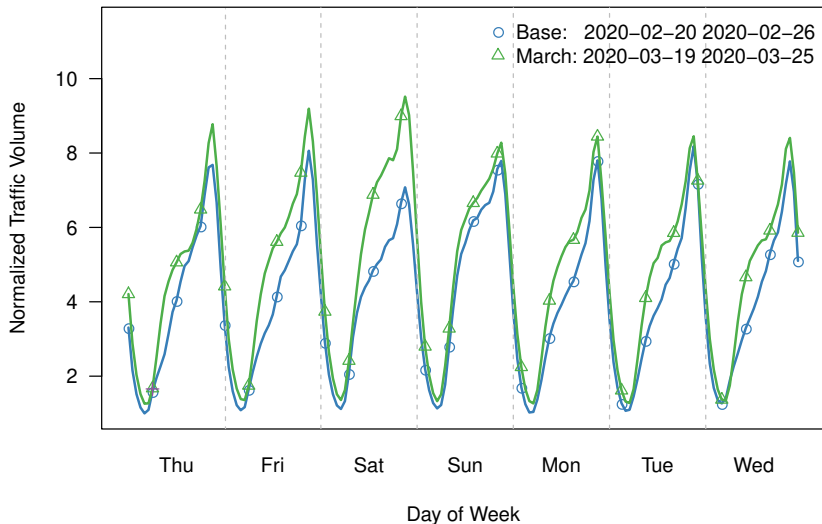

- Large customer base in central Europe
- Tier-1 ISP: cross-cut through society
- Possibility to filter for subscriber lines
 - End-user view
 - Small business view
- Operates in the same region as the IXP: Augments view^a

^a This presentation is limited to the ISP perspective on COVID-19. More details are provided in the IMC'20 paper.

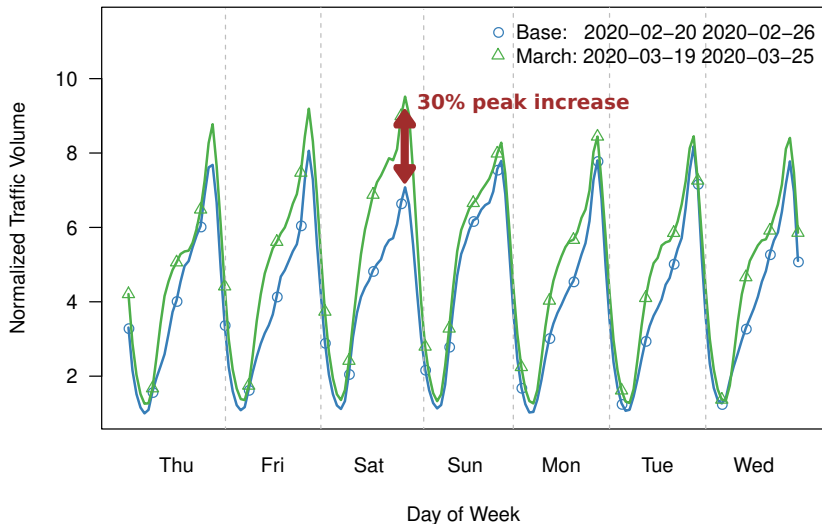

ISP TRAFFIC VOLUME DEVELOPMENT IN THE FIRST COVID WAVE (2020)

LOCKDOWN: CHANGE IN WORKDAY VS. WEEKEND PATTERN (ISP)

LOCKDOWN: CHANGE IN WORKDAY VS. WEEKEND PATTERN (ISP)

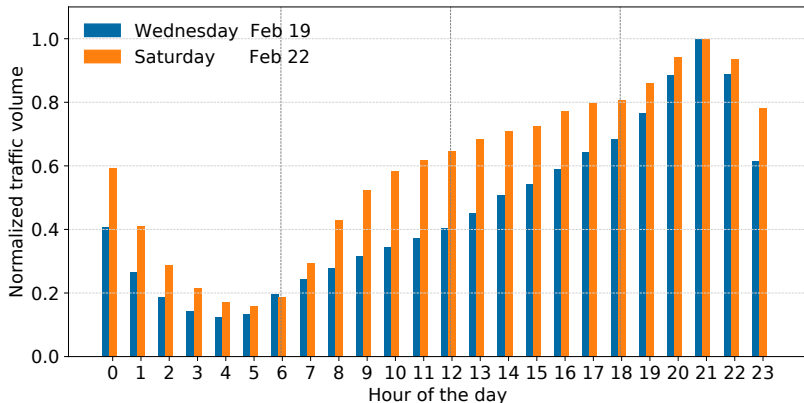

LOCKDOWN: CHANGE IN WORKDAY VS. WEEKEND PATTERN (ISP)

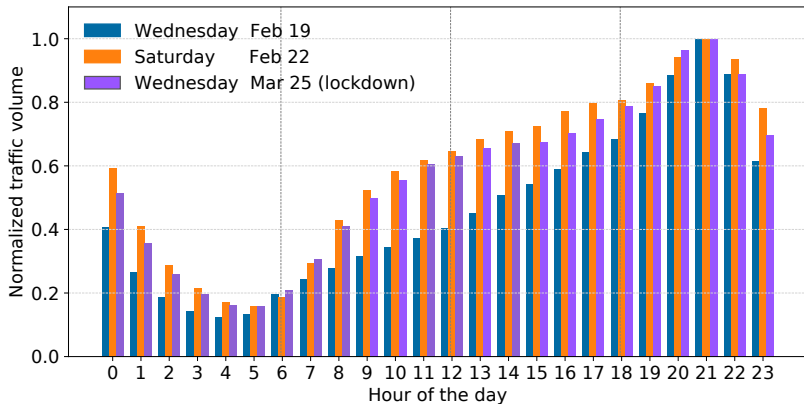

- Regular patterns

LOCKDOWN: CHANGE IN WORKDAY VS. WEEKEND PATTERN (ISP)

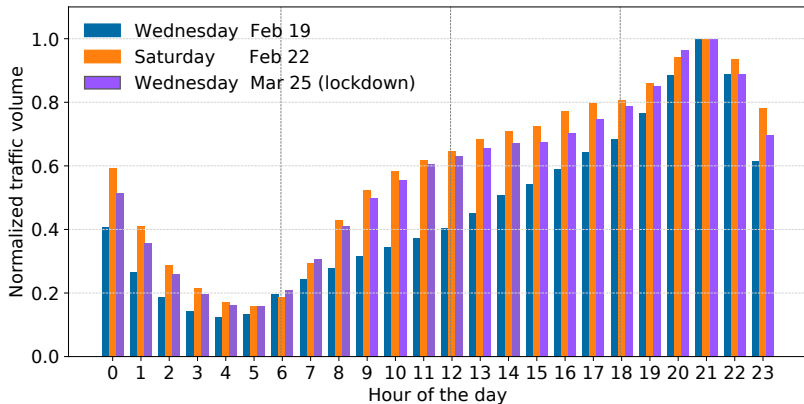

- Regular patterns
 - Workday: Strong increase in evening hours
 - Weekend: More traffic during daytime

LOCKDOWN: CHANGE IN WORKDAY VS. WEEKEND PATTERN (ISP)

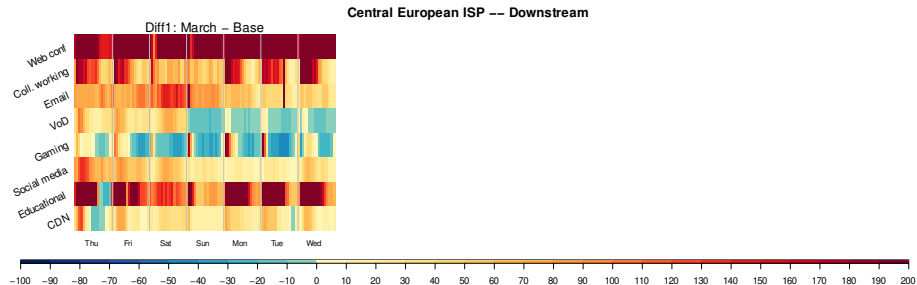

- Regular patterns
 - Workday: Strong increase in evening hours
 - Weekend: More traffic during daytime

LOCKDOWN: CHANGE IN WORKDAY VS. WEEKEND PATTERN (ISP)

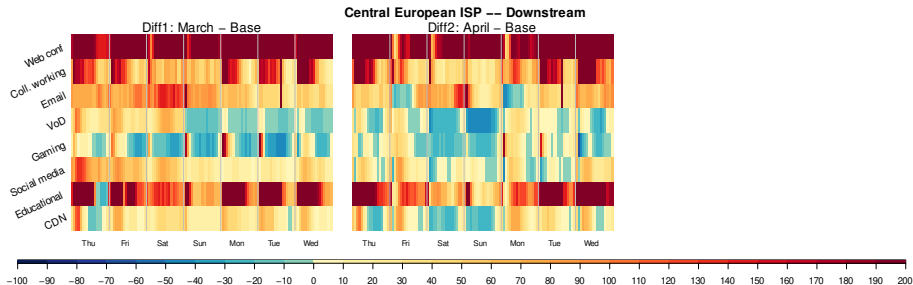

- Regular patterns
 - Workday: Strong increase in evening hours
 - Weekend: More traffic during daytime
- During pandemic: Workdays look more like weekends.

CHANGES IN APPLICATION CLASSES: CENTRAL EUROPEAN ISP

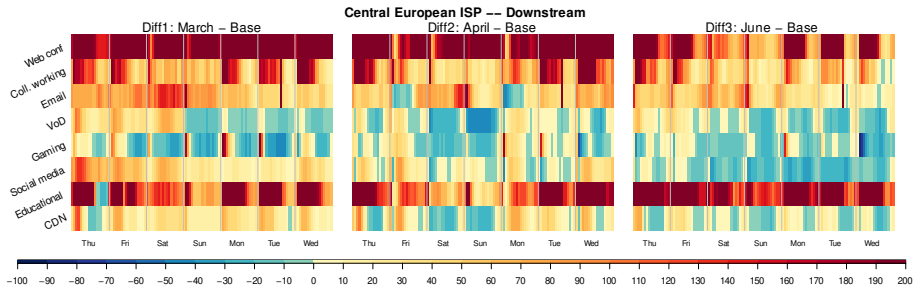

CHANGES IN APPLICATION CLASSES: CENTRAL EUROPEAN ISP

March & April:

- Large increase in web conferencing, collaborative working, and educational traffic

CHANGES IN APPLICATION CLASSES: CENTRAL EUROPEAN ISP

March & April:

- Large increase in **web conferencing**, **collaborative working**, and **educational traffic**

June:

- **Web conferencing** still growing, but more focused on **working hours**
- Moderate growth in **collaborative working**

- Changes in people's lives lead to new traffic patterns

- Changes in people's lives lead to new traffic patterns
- Difference between weekday and weekend vanishes

- Changes in people's lives lead to new traffic patterns
- Difference between workday and weekend vanishes
- Applications for remote work, education, and video conferencing see significant increase in traffic

- Changes in people's lives lead to new traffic patterns
- Difference between workday and weekend vanishes
- Applications for remote work, education, and video conferencing see significant increase in traffic

We find that the impact of the COVID-19 pandemic is directly reflected in changes to Internet traffic patterns.

- Traffic increase of 15-30% within a few days
- Networks usually provision for $\approx 30\%$ increase per year

- Traffic increase of 15-30% within a few days
- Networks usually provision for $\approx 30\%$ increase per year
- The Central European IXP reports capacity increases of around 1,500 Gbps

- Traffic increase of 15-30% within a few days
- Networks usually provision for $\approx 30\%$ increase per year
- The Central European IXP reports capacity increases of around 1,500 Gbps
- Operators at our vantage points could react quickly to the additional need for capacity

- Traffic increase of 15-30% within a few days
- Networks usually provision for $\approx 30\%$ increase per year
- The Central European IXP reports capacity increases of around 1,500 Gbps
- Operators at our vantage points could react quickly to the additional need for capacity

Networks can accommodate sudden changes in demand if they're planned with spare capacity and quick reaction times.
