The importance of data and the role it plays in identifying gender issues

"One of the most important things to say about the **gender data gap** is that it is not generally **malicious**, or even **deliberate**. Quite the opposite.

It is simply the product of a way of thinking that has been around for millennia and is therefore a kind of *not* **thinking**."

"Failing to include the perspective of women is a huge driver of **unintended male bias** that attempts (often in good faith) to pass itself off as 'gender neutral'."
